

Overview

The Wedbush ReturnOnLeadership® U.S. Large-Cap ETF seeks to capitalize on systematic investment in U.S. large-cap companies demonstrating superior leadership execution, using an AI-driven, rules-based process that objectively measures how effectively management teams translate strategy and purpose into results across multiple organizational dimensions. The strategy seeks to capture persistent quality-driven outperformance while complementing traditional financial and factor-based equity allocations.

ETF Objective

The Wedbush ReturnOnLeadership® U.S. Large-Cap ETF (the “Fund”) seeks to track the total return performance, before fees and expenses, of the Solactive Indiggo ReturnOnLeadership® US Large-Cap Index (the “Index”).

Important Information

The Solactive Indiggo ReturnOnLeadership® U.S. Large-Cap Index (the “Index”) is comprised exclusively of equity securities of the 50 highest-ranked large-capitalization companies in the United States based on each company’s ReturnOnLeadership® (“ROL”) composite score.

AI Risk. The Index uses large language models and generative AI to create the ROL composite scores upon which inclusion in the Index is based. AI models may rely on techniques such as natural language processing and machine learning which are less transparent or interpretable and may produce unexpected results, which could adversely impact the Fund. If the content, analyses or recommendations of the AI models used by the Index are or are alleged to be deficient, inaccurate or biased, the Fund may be adversely affected. Additionally, AI tools used by the Index Provider, Adviser, or Indiggo may produce inaccurate, misleading or incomplete responses that could lead to errors in decision-making, portfolio management or other business activities, which could have a negative impact on the performance of the Fund. There is no guarantee that the Index will reflect the exposures intended. The Index Provider relies on the integrity of the data being analyzed and its review processes could be adversely affected if erroneous or outdated data is utilized.

Calculation Methodology Risk. The Index relies directly or indirectly on various sources of information to assess the criteria of issuers included in the Index, including information that may be based on assumptions and estimates. Neither the Fund nor the Adviser can offer assurances that the Index’s calculation methodology or sources of information will provide an accurate assessment of included issuers or a correct valuation of securities, nor can they guarantee the availability or timelines of the production of the Index.

Concentration risk. The Fund’s investments will be concentrated in an industry or group of industries to the extent that the Index is so concentrated. In such event, the value of the Shares may rise and fall more than the value of shares of a fund that invests in securities of companies in a broader range of industries.

Non-Diversification Risk. The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Limited Operating History Risk. The Fund is a recently organized investment company with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision.

ROL Model Risk. Proprietary models, such as the ROL model, that may be used to evaluate securities or securities markets are based on certain assumptions concerning the interplay of market factors and may not adequately take into account certain factors and may result in the Fund having a lower return than if the Fund were managed using another model or investment strategy. The markets or prices of individual securities may be affected by factors not foreseen in development the models. The equity securities of companies with favorable ROL attributes may underperform the stock market as a whole. As a result, the Fund may underperform other funds that do not screen companies based on ROL attributes.

Carefully consider the Fund’s investment objectives, risks, charges and expenses before investing. This and other information can be found in the Fund’s statutory and summary prospectuses, which may be obtained at WedbushFunds.com . Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the Fund.

The Fund is an exchange-traded fund (“ETF”) that employs a “passive management” (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Index. The Fund does not try to “beat” the Index and does not seek temporary defensive positions when markets decline or appear overvalued.

Brokerage commissions will reduce returns.
